

**WHAT IS CLAIMED IS:**

1. A method of calculating a static formation temperature in a reservoir penetrated by a wellbore; comprising:  
  
estimating the static formation temperature;  
  
5 calculating a formation fluid temperature at the wellbore, said calculation based, in part,  
  
on the estimated static formation temperature;  
  
measuring the temperature of a sample of formation fluid at the wellbore;  
  
comparing the calculated formation fluid temperature at the wellbore with the measured  
  
temperature of the sample of formation fluid; and  
  
predicting the static formation temperature by altering the estimate of the static formation  
  
temperature until an error between the calculated formation fluid temperature at  
  
the wellbore and the measured formation fluid temperature is minimized.
2. The method of claim 1, wherein the calculation of formation fluid temperature at the wellbore comprises solving radial heat flux equations.
3. The method of claim 1, wherein the calculation of formation fluid temperature at the wellbore comprises developing a three-dimensional fluid flow model through the reservoir.
4. The method of claim 3, wherein the three-dimensional fluid flow model through the reservoir is developed using an estimated formation fluid withdrawal rate at the wellbore.

5. The method of claim 1, wherein the calculation of formation fluid temperature at the wellbore comprises solving radial heat flux equations in conjunction with a three-dimensional fluid flow model to develop a calculated fluid formation temperature at the wellbore versus time profile.

5

6. The method of claim 5, wherein the measured temperature of a sample of formation fluid at the wellbore is used to develop a measured temperature of a sample of formation fluid at the wellbore versus time profile.

7. The method of claim 6, wherein the error between the measured temperature of a sample of formation fluid at the wellbore versus time profile and the calculated formation fluid temperature at the wellbore versus time profile is quantified.

8. The method of claim 7, wherein the static formation temperature is predicted by minimizing the error between the measured temperature of a sample of formation fluid at the wellbore versus time profile and the calculated formation fluid temperature at the wellbore versus time profile.

9. The method of claim 1, further comprising:

20

inserting a sink probe within the wellbore;

engaging the sink probe with the formation at a wellbore wall; and

removing fluid from the formation at the wellbore by the sink probe at a substantially known withdrawal rate.

10. The method of claim 9, wherein the sink probe is run into the wellbore on a wireline.
11. The method of claim 9, wherein the sink probe is run into the wellbore on a tubular  
5 string.

12. A method of calculating a static formation temperature in a reservoir penetrated by a wellbore, comprising:

estimating the static formation temperature in the reservoir and a wellbore fluid  
15 temperature;

creating a calculated formation fluid temperature at the wellbore versus time profile for  
fluid removed from the formation by a sink probe, based upon, in part on the  
estimates of the static formation temperature in the reservoir and the wellbore  
fluid temperature;

measuring the temperature of the formation fluid at the wellbore removed from the  
formation by the sink probe, and creating a measured fluid formation temperature  
at the wellbore versus time profile;

comparing the measured fluid formation temperature at the wellbore versus time profile  
to the calculated formation fluid temperature at the wellbore versus time profile;

20 and

predicting the static formation temperature by altering the estimates of the static  
formation temperature in the reservoir and a wellbore fluid temperature until the  
error between the measured fluid formation temperature at the wellbore versus

time profile to the calculated formation fluid temperature at the wellbore versus time profile is minimized.

13. The method of claim 12, further comprising:

5 inserting a sink probe within the wellbore;  
engaging the sink probe with a wellbore wall; and  
removing fluid from the formation at the wellbore by the sink probe at a substantially known withdrawal rate.

14. The method of claim 13, wherein the sink probe is run into the wellbore on a wireline.

15. The method of claim 13, wherein the sink probe is run into the wellbore on a tubular string.

16. The method of claim 13, wherein the sink probe is run into the wellbore after wellbore fluid circulation within the wellbore has ceased.

17. A method of predicting the static formation temperature in a reservoir penetrated by a wellbore, comprising:

20 estimating the static formation temperature;  
estimating a wellbore fluid temperature;  
calculating a calculated formation fluid temperature versus radial distance profile using one-dimensional radial heat flux equations;

calculating a three-dimensional fluid flow model of the reservoir utilizing an estimated  
formation fluid withdrawal rate at the wellbore, thereby establishing a formation  
fluid location versus time profile;

combining the calculated formation fluid temperature versus radial distance profile with  
the formation fluid location versus time profile to create a calculated formation  
fluid temperature at the wellbore versus time profile;

removing fluid from the formation at the wellbore at a substantially known and  
substantially constant withdrawal rate;

measuring the temperature of the formation fluid upon removal from the formation;

creating an observed formation fluid temperature at the wellbore versus time profile;

quantifying the error between the observed formation fluid temperature at the wellbore  
versus time profile and the calculated formation fluid temperature at the wellbore  
versus time profile;

modifying the estimates of the static formation fluid temperature and the wellbore fluid  
temperature;

generating a revised calculated formation fluid temperature at the wellbore versus time  
profile; and

predicting the static formation temperature by repeating the iteration of modifying the  
estimated static formation fluid temperature and wellbore fluid temperature  
variables, and generating a revised calculated formation fluid temperature at the  
wellbore versus time profile, until the error between the calculated formation fluid  
temperature at the wellbore versus time profile and the observed formation fluid  
temperature at the wellbore versus time profile is minimized.

18. The method of claim 17, further comprising:  
inserting a sink probe within the wellbore;  
engaging the sink probe with a wellbore wall; and  
5 removing fluid from the formation at the wellbore by the sink probe at a substantially  
known withdrawal rate.
19. The method of claim 18, wherein the sink probe is run into the wellbore on a wireline.
20. The method of claim 18, wherein the sink probe is run into the wellbore on a tubular  
string.
21. The method of claim 18, wherein the sink probe is run into the wellbore after wellbore  
fluid circulation within the wellbore has ceased.
